

Elementary Particles II

Organization, Contents, Literature

Academic Year 2018-2019

Logistics & Human Resources

Time

Monday 9-11, Wednesday 16-18, Friday 14-16

Place

Monday: Aula Avogadro, Wednesday & Friday Aula Verde

But: Watch for changes..

People

E.Menichetti – Lectures

Organization

6 CFU Course ~ 48 h

Exam Requirements

Oral examination

(Will include a 15' oral presentation on some agreed subject)

Exam Dates

Upon individual request

Course Web Page

<http://www.ph.unito.it/~menichet/Particelle2-1617.html>

Background

Required basic familiarity with:

[Special Relativity

Quantum Mechanics

Introductory Nuclear & Particle Physics]

Relativistic Quantum Mechanics

Accelerators and Detectors

Introductory Quantum Field Theory

First Half of Elementary Particle Physics

Contents

QCD

Color Gauge Theory, Gluons, Color Interaction, Asymptotic Freedom, Confinement, Perturbative QCD, Quarkonia

Electroweak Interaction

Fermi Theory, Unitarity Violations, Intermediate Vector Boson, Electroweak Unification, Neutral Currents, Spontaneous Symmetry Breaking, Discovery of W and Z, Tests of the Standard Model

Flavor Physics

Key Points

Guidelines:

*Little interference with the (many) theoretical courses
'Experimental/Phenomenological', whatever it means*

Difficult task (for both students *and* teacher):

Experimental particle physics is notoriously difficult to either teach or learn in a classroom

Today's large experiments and machines operating conditions are quite far from common experience, filled with extreme technology, sometimes hard to understand at first contact

Goal definitely worth the effort:

Exploration, Validation and Extension of the SM

One of the most exciting intellectual challenges available on the market
