

## Damiano Giubertoni

*FBK - Fondazione Bruno Kessler*

Dr. Damiano Giubertoni is a researcher of the MNF group. His work has been focused on surface characterization, mostly by secondary ion mass spectrometry (SIMS), doping technologies in semiconductors, ion beam induced nanostructures and self-assembly phenomena, nanofabrication by electron beam lithography and focused ion beam techniques. He has co-authored around 100 papers on peer-reviewed journals, hold a patent and he has been tutor for several PhD and M.S. students. Since 2018 he has been following the foundation and management of the nanofabrication laboratories of FBK.
